

Daily Operations Report

Executive operations briefing covering volcanic pumice aggregate haulage and surface leveling across Greens No. 14, 15, 16 & 17, and perimeter boundary irrigation system trench excavation at Mucheru World of Golf; daily dairy milking production and allocations reconciliation in Litres at Chaka Farms; and resident pet dietary nutrition cooking, portioning, veranda feeding, and comprehensive kitchen cooker and oven sanitation at Kabete Residence.

ACTIVE OPERATIONS
SITES

3 Sites Active

Mucheru Golf, Chaka Farms & Kabete Residence

GOLF COURSE
MILESTONES

Greens 14, 15, 16
& 17

Pumice Sub-Base Transfer
& Irrigation Trenching

DAIRY MILKING YIELD

5.0 L Gross

2.5L AM / 2.5L PM | 3.0 L
Net Farm Reserve

DOMESTIC PET CARE &
FACILITIES

4 Animals Fed

Cooked Food for Ajabu & Cats; Cooker Cleaned

Operations Summary — Sunday, September 13, 2026

Operations across all three active properties advanced with high precision, maintaining steady momentum in golf course sub-base construction and utility infrastructure, farmstead dairy milking and reserve auditing, and dedicated domestic pet care and kitchen facility sanitation:

- Mucheru World of Golf:** Ground labor teams actively loaded and transferred volcanic pumice aggregate via wheelbarrows onto Greens 14, 15, 16, and 17, spreading and grading uniform drainage sub-base layers over the containment liners. Concurrently, excavation crews dug continuous perimeter utility trenches alongside the boundary fence to house the course's primary irrigation pipe network.
- Chaka Farms:** Dairy milking yielded 5.0 Litres gross production, recorded strictly in Litres (2.5L morning / 2.5L evening). Following authorized rations of 1.0 Litre for goat kids, 0.5 Litres for Gladys, and 0.5 Litres for Maasai, an exact net farm reserve of 3.0 Litres was safely retained in storage.
- Kabete Residence:** Amos the guard prepared a nutritious batch of animal food by rinsing grains and cooking a large pot of rice, subsequently portioning meals for senior retriever Ajabu and resident cats Reo, Mocha, and Aiko. Immediately after feeding, Amos performed deep scrubbing and sanitation of the gas cooker, oven burners, and wash sink.

Key Progress Highlight

Four championship putting green basins (Greens 14, 15, 16 & 17) received volcanic pumice aggregate layers, while linear perimeter trenching progressed smoothly along the boundary line at Mucheru World of Golf.

Putting Green Sub-Base Construction, Pumice Transfer & Irrigation Trench Excavation

Field operations and civil construction at Mucheru World of Golf progressed systematically under the direct on-site supervision of Ken, focusing on putting green sub-surface drainage preparation and perimeter irrigation infrastructure installation:

- **Haulage & Spreading of Volcanic Pumice on Greens No. 14, 15, 16 & 17:** Ground workforce personnel utilized wheelbarrows, shovels, and grading rakes to haul, transfer, and evenly distribute volcanic pumice aggregate across the foundation beds of putting Greens No. 14, 15, 16, and 17. The porous pumice aggregate was spread over the impermeable containment liners and fractured hardcore beds, establishing the essential drainage transition matrix and aeration buffer directly beneath the upcoming rootzone profile.
- **Manual Excavation of Irrigation System Utility Trenches:** Dedicated trenching labor crews manually excavated continuous linear utility trenches running parallel to the perimeter boundary fence line. Aligned alongside the black fence posts and wire barrier, these trenches are cut to uniform depth and gradient to accommodate main subterranean irrigation water supply pipelines that will service the golf course greens and fairways.

Key Accomplishments — Mucheru World of Golf

Volcanic pumice aggregate successfully hauled, transferred, and graded across putting Greens 14, 15, 16, and 17; continuous linear perimeter utility trenches excavated along the course boundary fence corridor for upcoming main irrigation pipeline installation.

Photographic Field Evidence — Mucheru World of Golf

Photographic documentation capturing irrigation pipeline utility trenching along the perimeter fence line and volcanic pumice aggregate distribution across putting green foundation basins.

Perimeter Fence Corridor — Irrigation Utility Trenching

Trenching personnel manually excavating a continuous, clean linear utility trench alongside the black perimeter fence posts to accommodate subterranean irrigation piping.

Boundary Pipeline Route — Linear Trench Excavation

Extended linear trench alignment cut through the dry fairway perimeter terrain, displaying excavated soil berms and uniform trench depth heading toward the farm buildings.

Greens 14, 15, 16 & 17 — Pumice Haulage & Distribution

Site labor crew actively shoveling volcanic pumice aggregate into wheelbarrows and transferring the material across the putting green foundation for manual grading.

Putting Green Basin — Completed Pumice Drainage Layer

Circular putting green basin lined with geotextile membrane displaying a smooth, leveled surface layer of volcanic pumice aggregate surrounded by compacted red soil berms.

Putting Green Sub-Base Engineering Standards

The structured layering of fractured hardcore rock foundations, impermeable geotextile liners, and leveled porous volcanic pumice ensures optimal subterranean drainage percolation, perched water table retention, and high rootzone aeration necessary for professional putting surface turfgrass.

Daily Dairy Milking Production, Rations Accounting & Farm Reserve Audit

Dairy livestock operations, milking hygiene routines, and quantitative yield reconciliation were conducted under the direct supervision of Kamandau:

- **Dairy Cow Milking Yield (Gross Production):** Morning and evening milking sessions yielded a combined gross volume of **5.0 Litres**, recorded strictly in Litres (2.5L collected during the morning session and 2.5L collected during the evening session).
- **Rations & Allocations Reconciliation:** Authorized disbursements drawn out of the total gross milk production totaled **2.0 Litres**, comprising:
 - **Goat Kids Ration:** 1.0 Litre total (0.5L morning ration + 0.5L evening ration for young stock nutrition).
 - **Staff Allocation — Gladys:** 0.5 Litres.
 - **Staff Allocation — Maasai:** 0.5 Litres.
- **Net Remaining Farm Milk Reserve:** After deducting all authorized nutritional and staff disbursements from the 5.0L gross production, the remaining balance retained in farm reserve stood at exactly **3.0 Litres** (2.0L morning reserve balance + 1.0L evening reserve balance).

Key Accomplishments — Chaka Farms

Gross dairy cow milking output recorded at 5.0 Litres (2.5L morning / 2.5L evening); complete reconciliation of 2.0 Litres in goat kid rations and staff allocations executed; leaving an audited net farm balance of 3.0 Litres stored in reserve.

 Dairy Milking Yield & Allocations Ledger

Overseen by: Kamandau

Quantitative daily milk production ledger recorded strictly in Litres (L). In accordance with reporting rules, rations and allocations represent disbursements drawn directly out of the gross milking yield:

ITEM / DESCRIPTION	MORNING (L)	EVENING (L)	TOTAL (L)	DEDUCTION (L)	FARM BALANCE (L)
Cow Milking Yield (Gross Production)	2.5 L	2.5 L	5.0 L	—	5.0 L
Goat Kids Ration (Young Stock Feed)	0.5 L	0.5 L	1.0 L	-1.0 L	—
Staff Allocation — Gladys	—	0.5 L	0.5 L	-0.5 L	—
Staff Allocation — Maasai	—	0.5 L	0.5 L	-0.5 L	—
Total Allocations Deducted	0.5 L	1.5 L	-2.0 L	-2.0 L	Disbursed
Net Remaining Farm Balance	2.0 L	1.0 L	3.0 L Net	—	3.0 L

Production & Allocation Reconciliation Audit

Total gross dairy milk production stood firmly at **5.0 Litres** (2.5L morning + 2.5L evening). Authorized disbursements drawn out of yield included **1.0 Litre** for goat kids (0.5L morning + 0.5L evening), **0.5 Litres** for Gladys, and **0.5 Litres** for Maasai. Total deductions equaled **2.0 Litres**, preserving an exact audited net farm balance of **3.0 Litres**.

Domestic Pet Dietary Preparation, Feeding Routines & Kitchen

Sanitation

Domestic pet wellness care, custom animal meal cooking, and kitchen appliance sanitation at Kabete Residence were executed by Amos the guard, with operational updates shared by Njoki:

- **Pet Meal Preparation by Amos:** Amos measured, rinsed, and cooked whole rice grains inside a large stainless steel cooking pot on the gas stovetop, preparing a nutritious, easily digestible carbohydrate base for the resident animals.
- **Individual Dietary Portioning & Serving:** Once cooked, the warm rice was portioned into four designated feeding bowls and enriched with meat and protein rations:
 - **Ajabu the Senior Golden Retriever:** Served a hearty portion in his large white plastic bowl on the shaded veranda, which he consumed with enthusiasm.
 - **Resident Cats (Reo, Mocha & Aiko):** Served their individualized rations in three matching stainless steel dishes, feeding harmoniously alongside one another on the clean tiled floor.
- **Comprehensive Stovetop, Oven & Sink Sanitation:** Immediately following meal preparation and feeding, Amos conducted a thorough cleaning and degreasing of the kitchen cooking station. The stainless steel gas cooker burners, burner caps, trivet grates, and surrounding oven surfaces were scrubbed and wiped spotless, and the stainless steel wash sink was washed, cleared of food remnants, and dried clean.

Key Accomplishments — Kabete Residence

Fresh wholesome meal prepared, cooked, and portioned for senior retriever Ajabu and resident cats Reo, Mocha, and Aiko; veranda and floor feeding completed calmly; comprehensive deep cleaning and degreasing of the gas cooker, oven unit, and wash sink executed by Amos.

Photographic Field Evidence — Kabete Residence

Photographic documentation illustrating animal dietary preparation, cooked meal pots, individual portioning dishes, pet feeding, and kitchen appliance sanitization.

Meal Preparation — Rinsing Rice Grains

Measured rice grains prepped and rinsed inside a large stainless steel pot in the wash sink prior to boiling on the gas cooker.

Pet Nutrition — Freshly Cooked Rice Pot

Large cooking pot filled with freshly steamed, fluffy rice prepared on the stove by Amos as the wholesome base for the pets' daily diet.

Portioning Station — Animal Dietary Bowls

Four individual meal bowls prepared on the counter: Ajabu's large white bowl alongside three stainless steel dishes for cats Reo, Mocha, and Aiko, all topped with protein.

Veranda Feeding — Ajabu the Retriever

Ajabu enjoying his freshly prepared meal from his dedicated feeding bowl on the tiled veranda at Kabete Residence.

Feline Feeding — Reo, Mocha & Aiko

Resident cats Reo, Mocha, and Aiko eating simultaneously from their individual stainless steel bowls placed along the tiled floor.

Kitchen Sanitation — Stovetop & Cooker Cleaned

Stainless steel gas cooker burners, grates, and surrounding cooktop surfaces thoroughly degreased, scrubbed, and wiped clean after cooking.

Facility Cleanliness — Wash Sink Scrubbed

Kitchen preparation sink thoroughly washed, cleared of debris, and dried spotless, maintaining high domestic hygiene standards.

Resident Animal Nutrition & Hygiene Standards

Meals are prepared fresh daily using whole carbohydrates and protein supplements to support the health and vitality of senior canine Ajabu and resident felines Reo, Mocha, and Aiko, accompanied by strict post-cooking sanitation of all food prep surfaces.
